I was a direct replacement for Roger Cadenhead (RMP Inspector) about October 2010. Soon after I contacted the IT department asking permission to access Roger's files on the shared server. They said his directory had been deleted. They had emailed Chris Petersen asking what to do with Roger's data. IT never got a response from Chris so the directory was deleted. Roger was the last person to have conducted an RMP inspection at the West Fertilizer Facility. The photos for all the inspected facilities are saved on the shared directory. Thus, all the photos Roger might have taken during his inspections have vanished, including the ones of the West Fertilizer Plant.

I believe IT's approach is to "delete" data (if no one claims it) rather than preserving the data (forever).

Perhaps someone should discuss this matter with IT.

Just my thought,
